

2021 ReCapNet Conference

19 November 2021

Keynote Lecture

“The Resilient Society”

Markus K. Brunnermeier

Edwards S. Sanford Professor of Economics

Director of the Bendheim Center for Finance

Princeton University

<https://scholar.princeton.edu/markus>

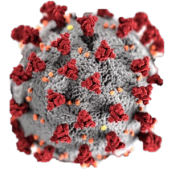

ReCapNet 2021

19. Nov. 2021

Living in a World with Recurrent Shocks

- Health: Pandemic – Covid-19 
- Antibiotic resistance
- Financial Crises
- Cyberattacks
- Natural disaster ... better building of infrastructure
- Uncertainty with new technologies

➔ Crises come typically in pairs/triplets ...

- **Resistance** is futile – resilience will help
- **Resilience** discussed everywhere
 - robustness, risk avoidance, ..., redundancies

Robustness \neq Resilience

■ Robustness

- withstand, fault tolerant
 - block **most** (known/unknown) shocks

the oak

■ Robustness barrier

Tipping point

■ Volatility Paradox

- Learning to be resilient via small risk exposure (human immune system)

■ Redundancies: many

vs.

■ Resilience

- Impact, but bounce back
 - React to shocks

the reed

"I bend, I bow, but I do not break"

La Fontaine

fewer, but re-deployable

Robustness \neq Resilience

■ Robustness

- withstand, fault tolerant
 - block **most** (known/unknown) shocks

the oak

■ Robustness barrier

Tipping point

vs.

■ Resilience

- Impact, but bounce back
 - React to shocks

the reed

Re-deployable
redundancies

"I bend, I bow, but I do not break"

La Fontaine

■ Rules vs. Discretion/Flexibility

- Rigidity is not stability
- Rules allow to commit and make reaction more credible powerful

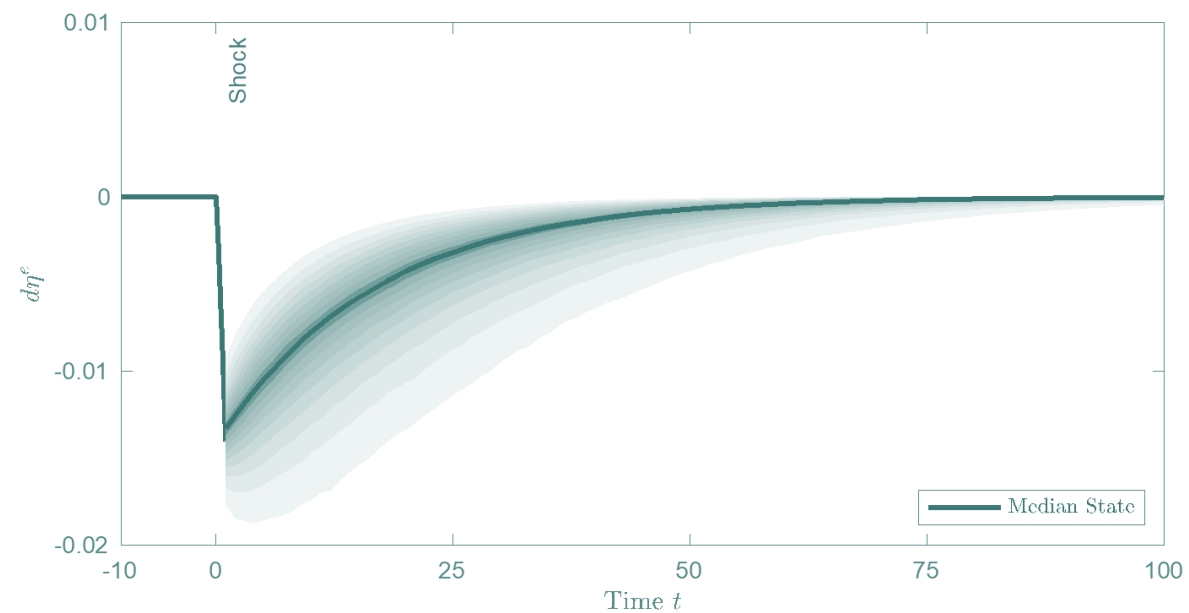

[Time-inconsistency problem]

Flexibility response
to react/adapt

Risk avoidance \neq Resilience

- Risk management - *static*
 - Variance
- Resilience management - *dynamic*
 - Mean-reversion
bounce “back” to new normal

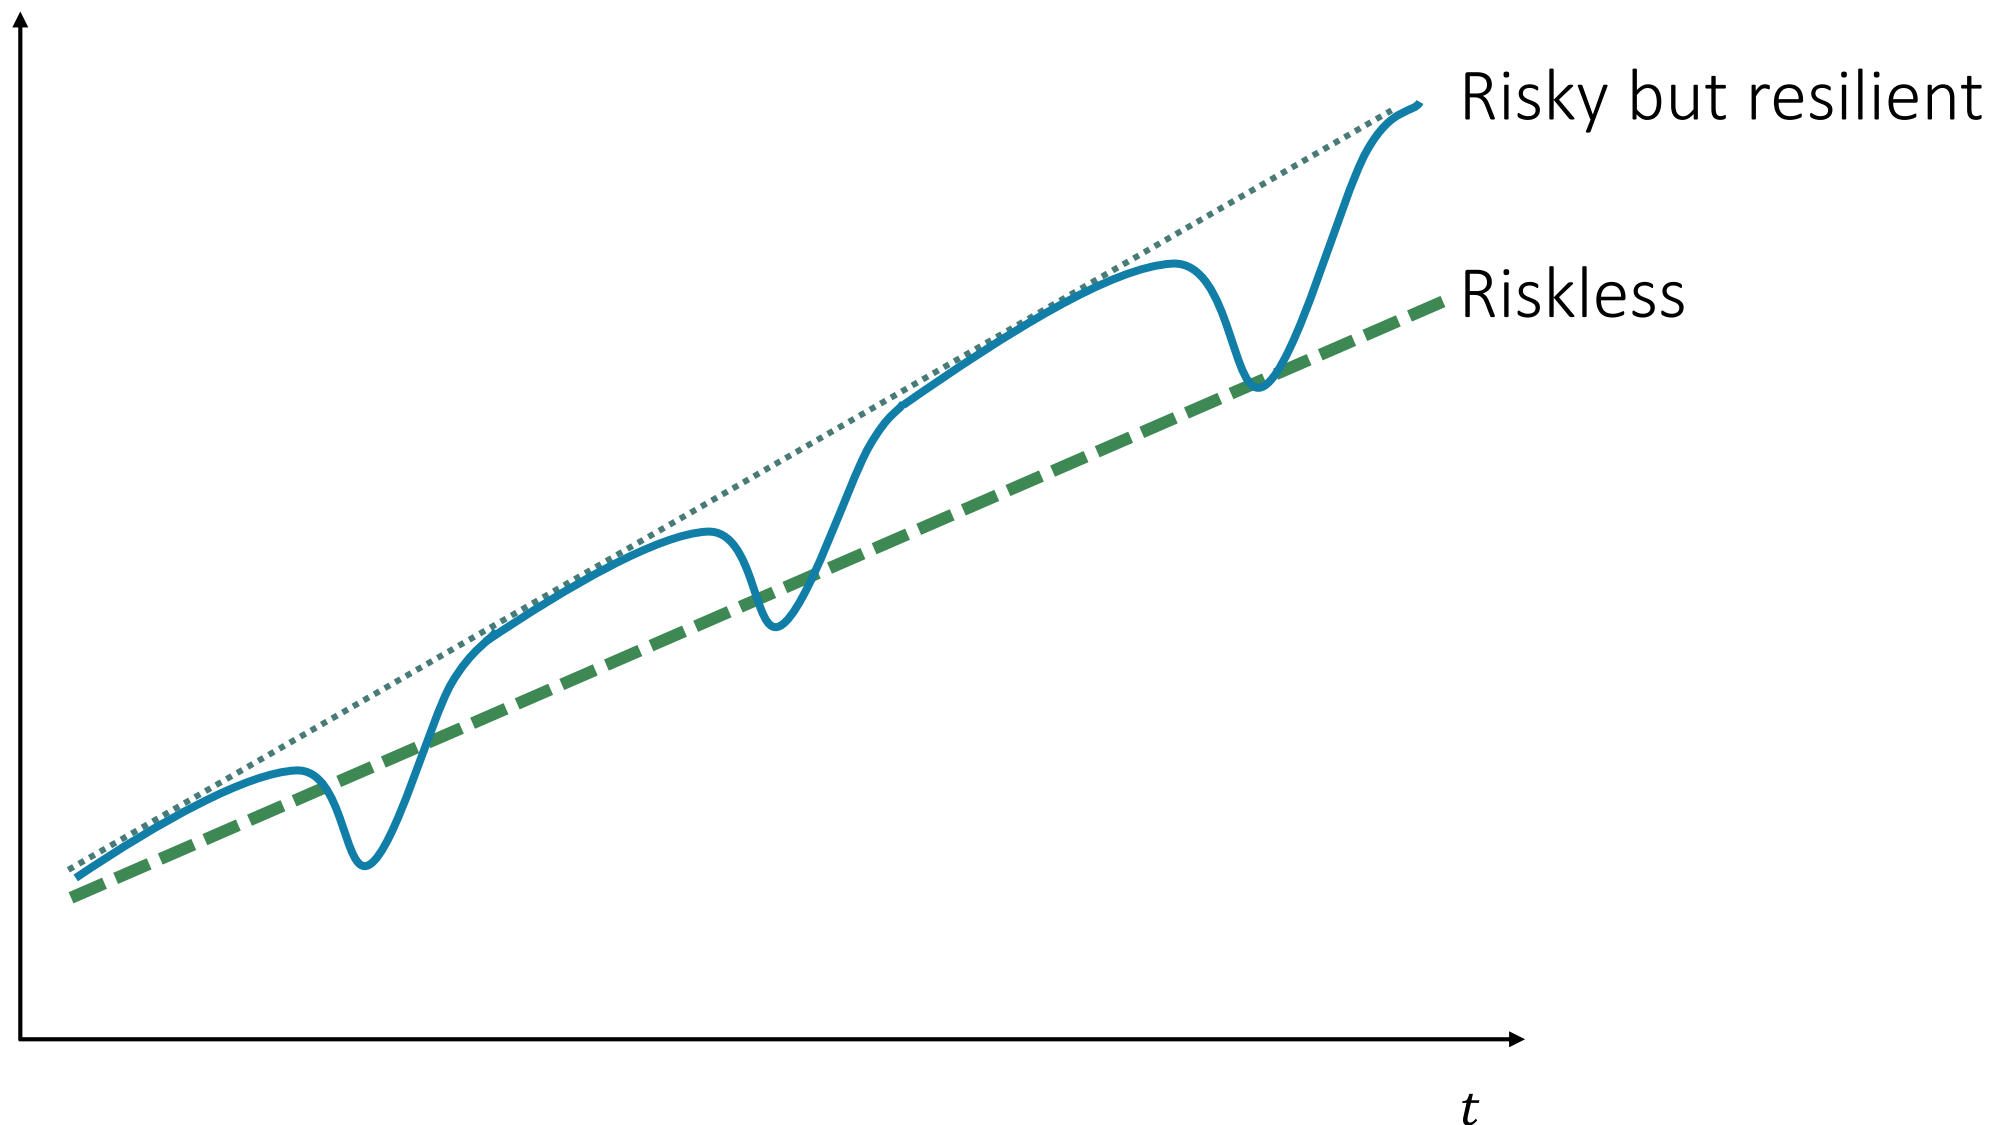

Distributional impulse response (Fanchart)

Ability to Rebound Allows to take Risk \Rightarrow **Growth**

- Resilient path vs. risk avoidance path

Resilience Destroyers

If externality of others' behavior, difficult to avoid

- **Traps:** “points of no return”
- **Feedbacks:**
- **Tipping Points:** path dependency

Climate change: Turning off the Gulf stream

Resilience and Speed

- **“Slow” shock** - sequence of small shocks
 - React in time and turn around/bounce back
- **Rapid Shock/Jump**
 - Reaction time is too slow in order to turn around
- Fintech: Race between
 - speed up financial crises
 - speed up reaction time, e.g. by government via programmable money

The “Term Structure of Resilience”

- Dynamic trade-off
 - **Bounce back more quickly** in the short-run at the expense of
 - Being **more vulnerable** to the next shock and to future
 - Traps
 - Feedback loops
 - Tipping point (move closer)
- Flexibility vs. better communication through commitment
 - Build the right institutions

Resilience: Individual, System, Society

- **Individual:** Training, human capital, freedom,
- **System:** Redundancies (networks, global value chains)
Buffers (bank capital, ...)
- **Society:**
 - Interaction btw individual's *externalities* and *responses*
 - Key: Endogenous reaction of others

“Feedback Externalities”

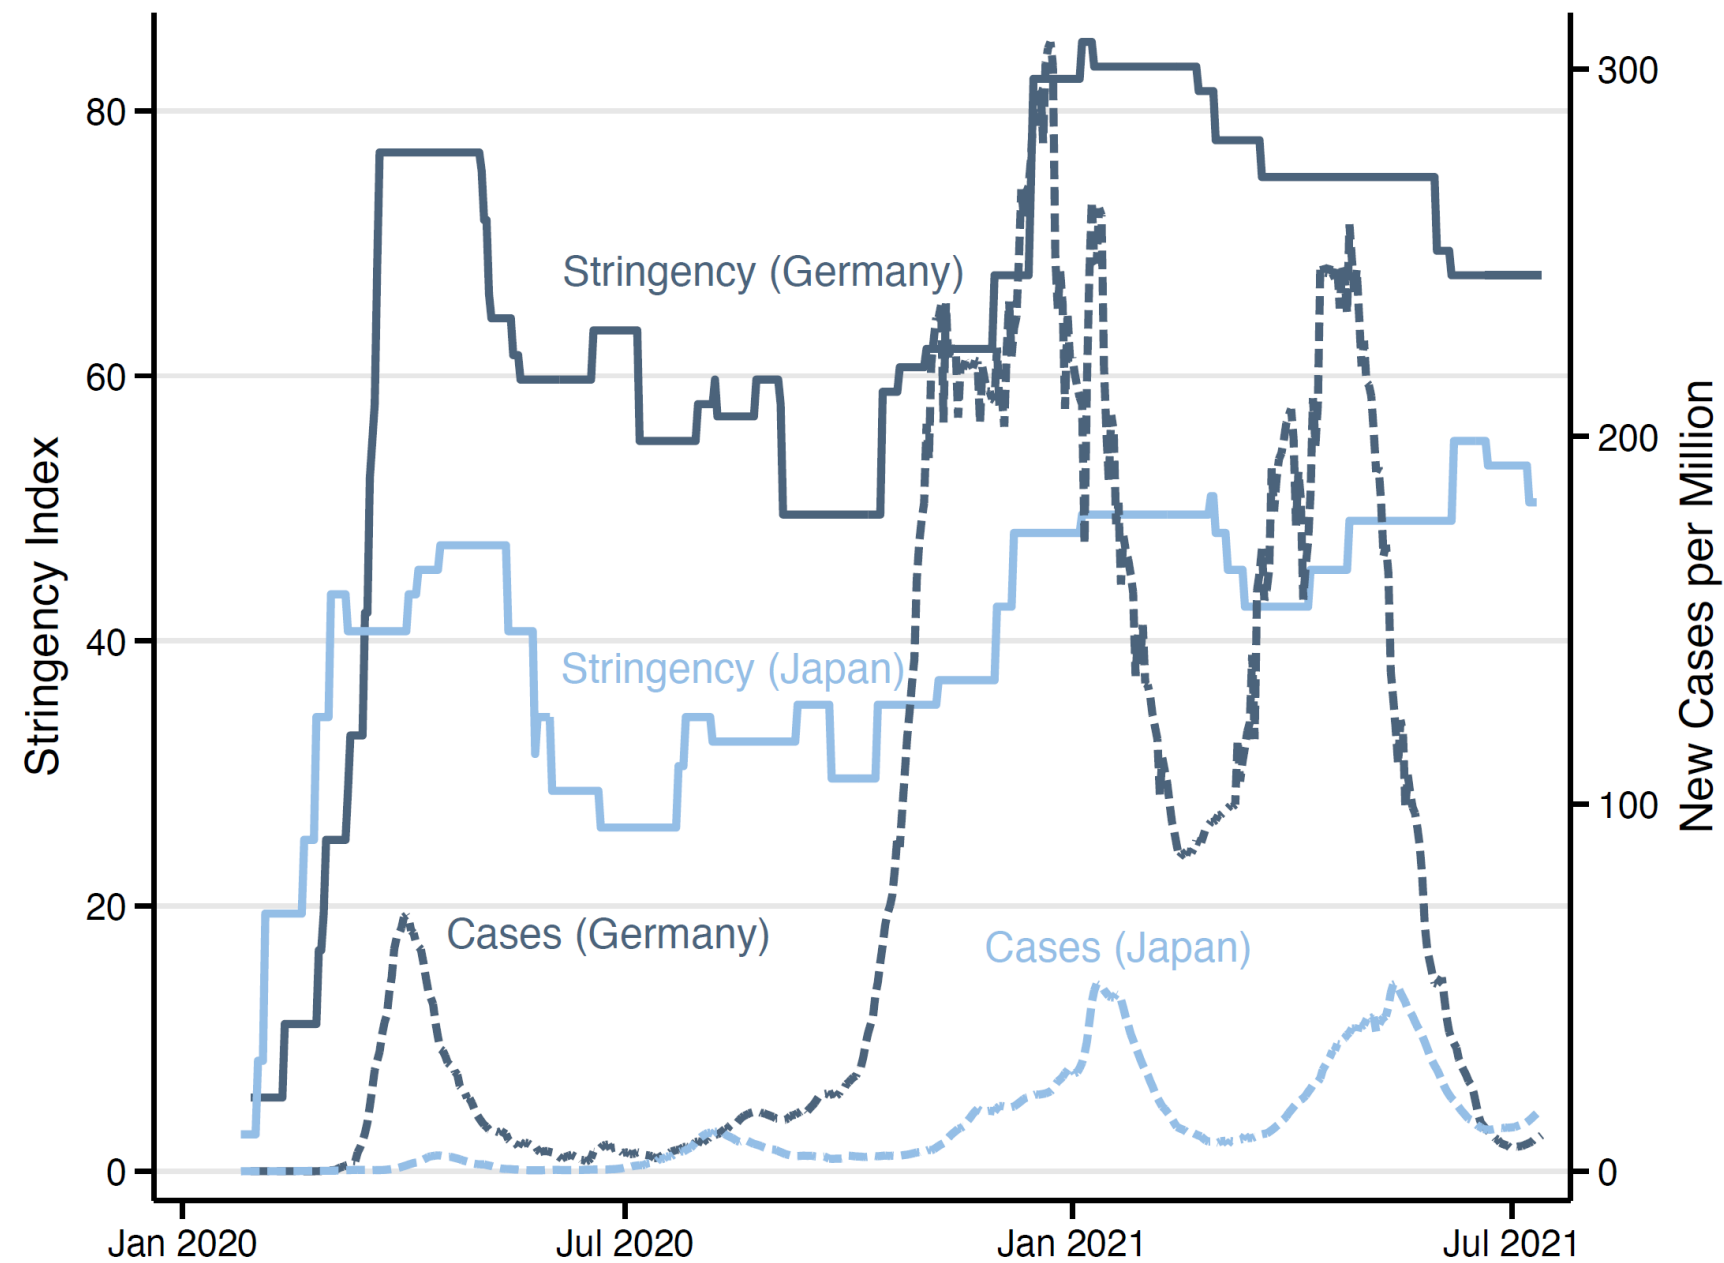

Social Contract

- Thomas Hobbes, (*Leviathan*, 1651),
John Locke,
Jean-Jacques Rousseau
 - An externality interpretation
- Social contract *to limit*
 - Externality from others
 - Incl. trap, feedback externalities
 - Robert Nozick
 - Shocks (externalities from mother nature)
 - John Rawls and the “veil of ignorance”
 - Not insure, but provide resilience
 - Diversity vs. homogeneity
- Implementation of social contract

Government Stringency vs. Social Norms

■ Germany vs. Japan

Outline of Book

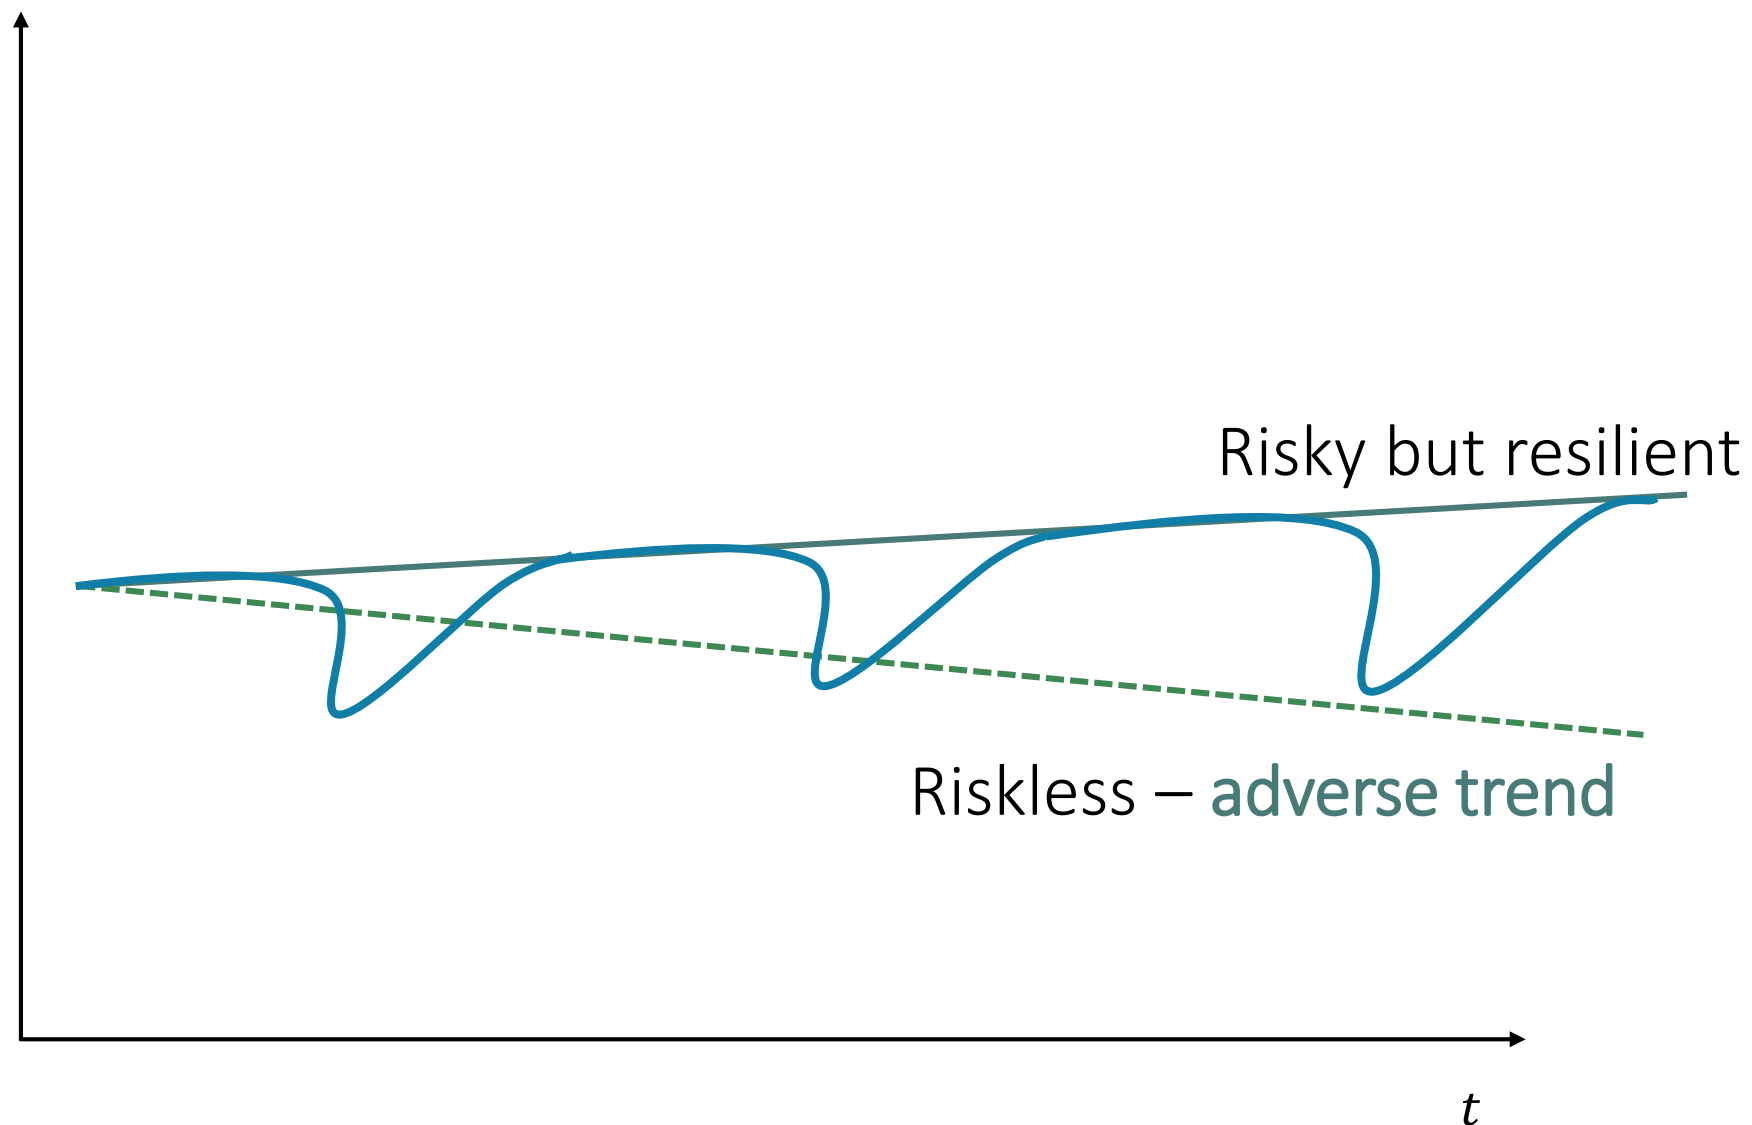

- Part I: Society and Resilience
 - Part II: 4 Elements of Resilience Management: COVID
 - Part III: Macro Resilience
 - Innovation boost vs. Scarring
 - Financial whipsaw
 - Public Debt
 - Inflation whipsaw
 - Part IV: Global Resilience
 - EMDE
 - Geopolitics, World order, Global finance, Value chains, Climate
- 

Climate Change Sustainability and Resilience

Resilience, Risk, and Growth - Sustainability

1. Resilience +
2. No adverse trend

Tipping Points: Resilient Sustainable Path

- Seemingly riskless part with adverse trend
 - Resilience path is only hope

Tipping Points: Resilient Risky Sustainable Path

- Tighter tipping point – resilience strategy is more risky

- Uncertain tipping point

Innovation and Scarring

Digitalization – Life Sciences

Econ New Normal: Innovation and Scarring

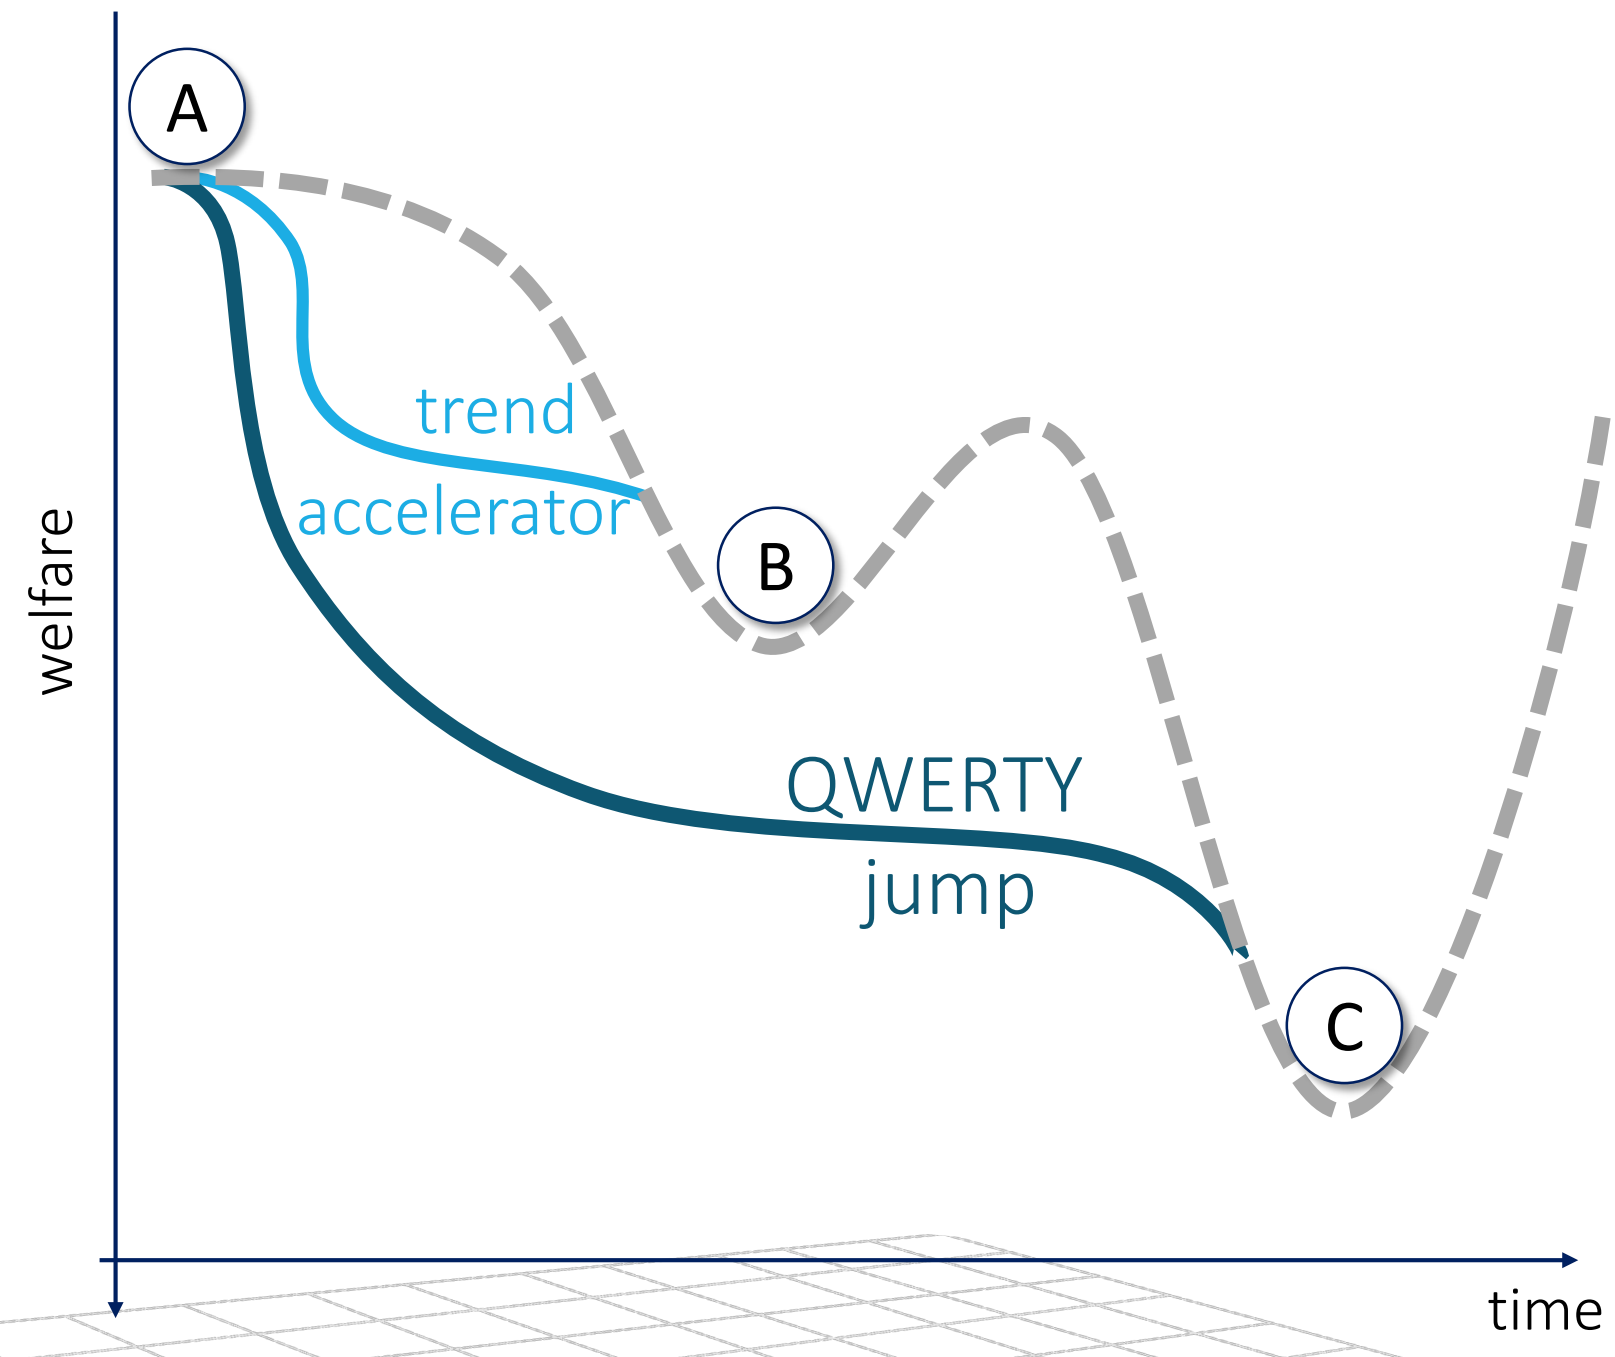

- **Innovation:** Overcoming cannibalization, QWERTY problem, regulatory shackles

- Tele medicine/Life sciences
- Home office and real estate donut effect
- Online learning/conferencing
- Digital Money

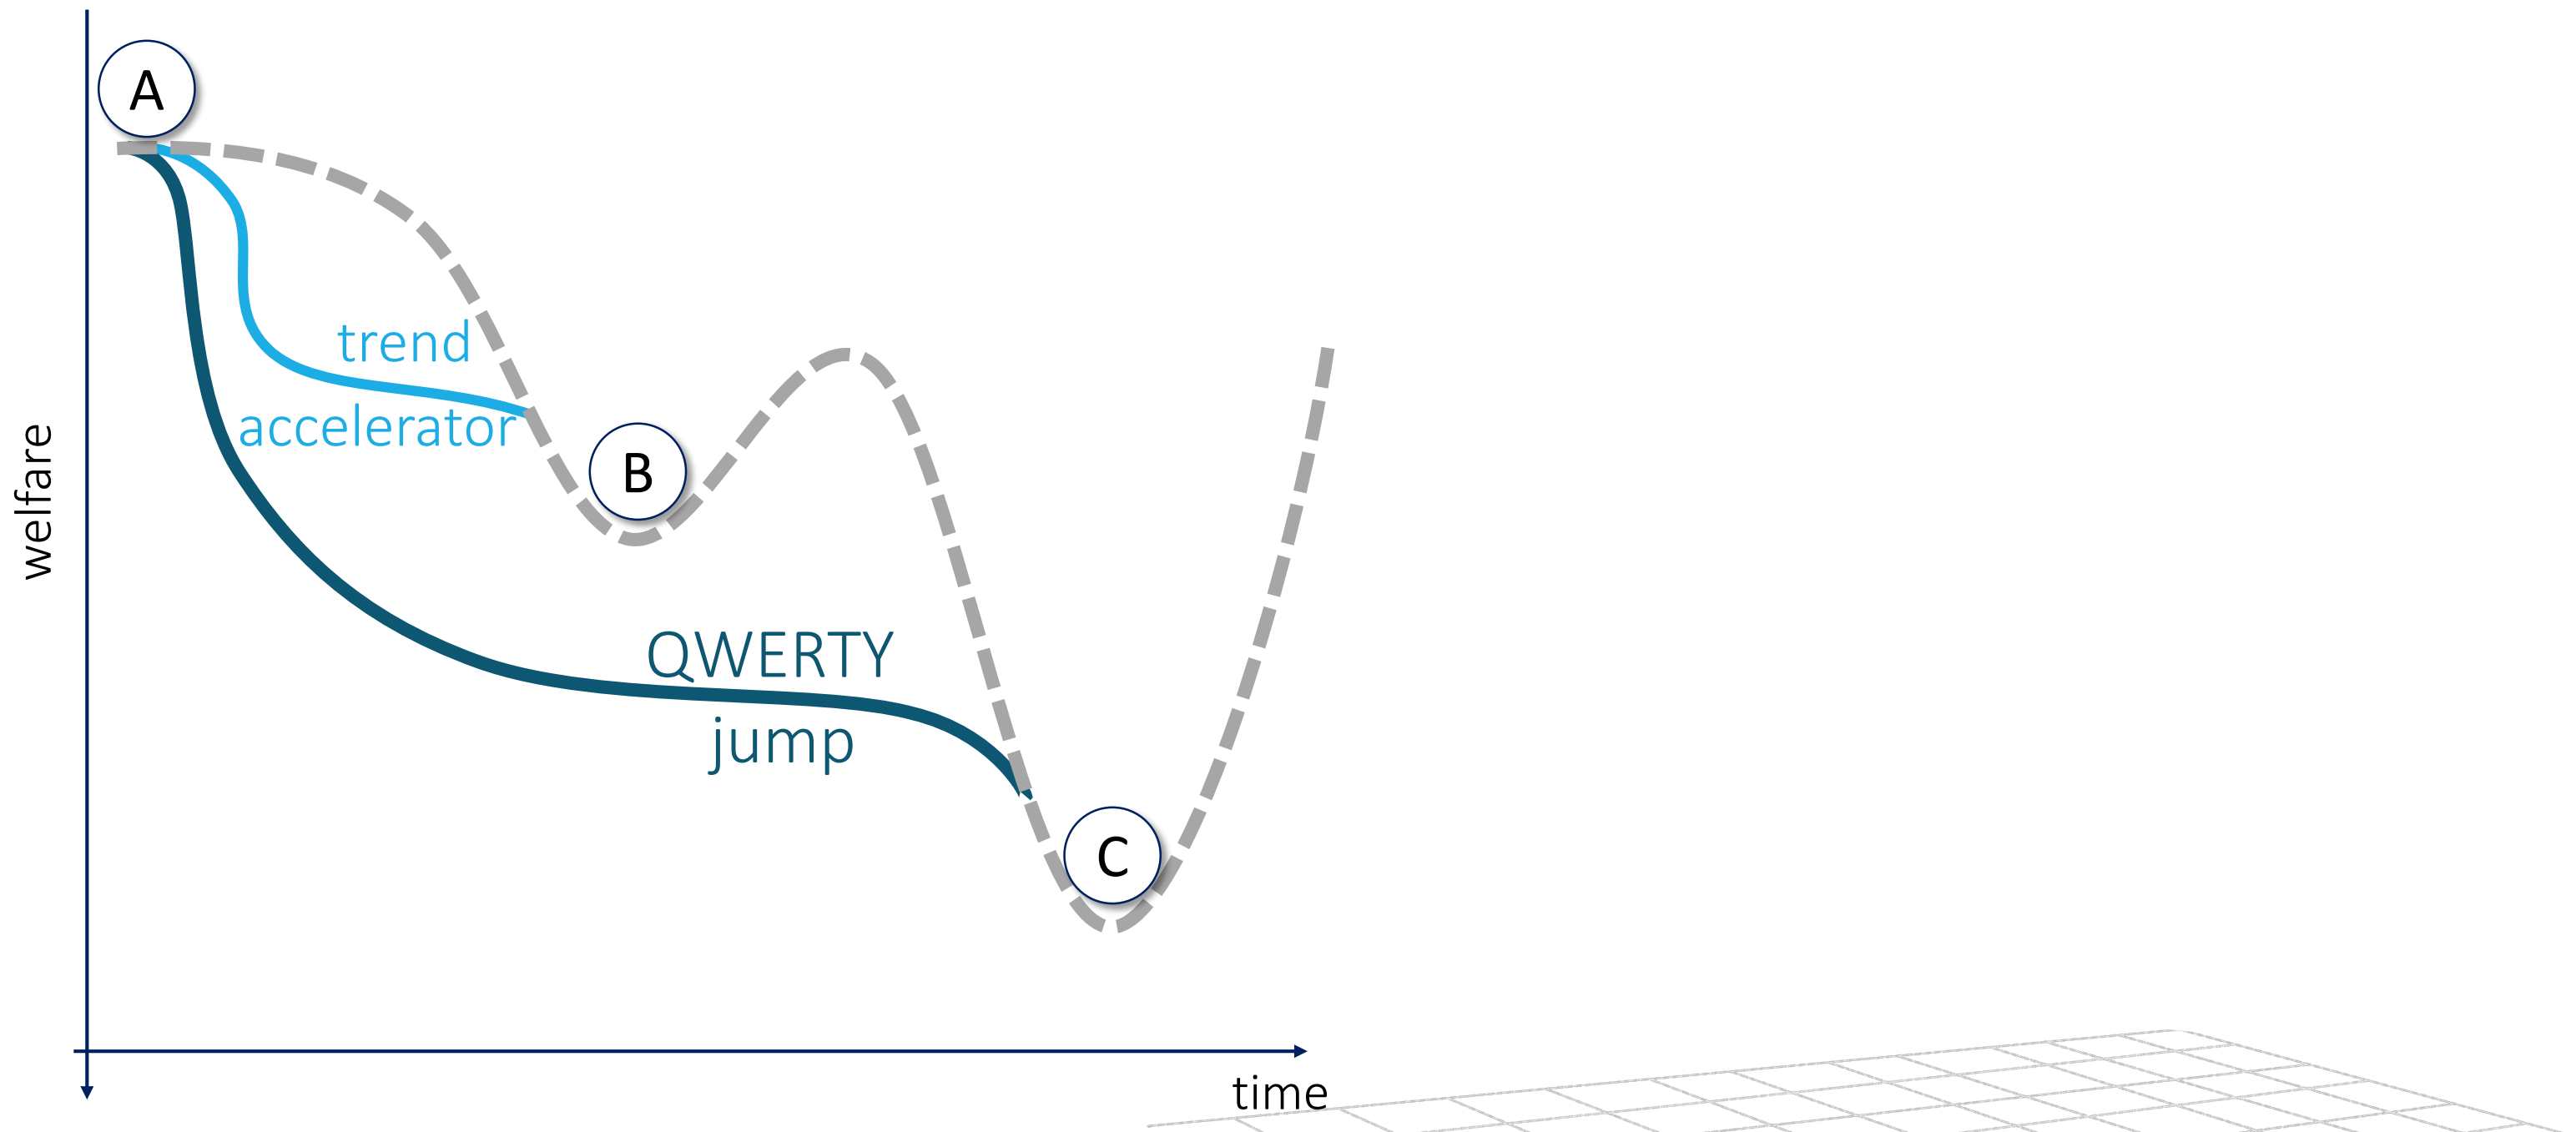

- **Scarring:**

- Belief and preference scarring
- Labor market scarring
- Debt overhang

Econ New Normal: Innovation and Scarring

- **Innovation:** Overcoming cannibalization, QWERTY problem, regulatory shackles

Covid and city design

- Fewer high rise buildings (lift fear)
 - From sky scrapers to office parks
 - Spread out cities ⇒ traffic
- Donut effect due to Covid for metropolitan areas
 - City centers are struggling, suburbs thriving

- Smart cities
 - Digitalization – New form of hygiene management (like sewage in 19th century)

Working from Home

Resilience and Policy Implications

- Health

- Vaccines to return to “new normal”

- Macro

- Low interest rate \Rightarrow more fiscal, less monetary resilience

- Finance

- Efficient debt restructuring -- Capital requirements (buffers)
(to avoid debt overhang)

Resilience and Policy Implications

- Health

- Vaccines to return to “new normal”

- Macro

- Low interest rate \Rightarrow more fiscal, less monetary resilience

- Finance

- Efficient debt restructuring -- Capital requirements (buffers) (to avoid debt overhang)

“robust”/resistant until it breaks through “Robustness barrier”

Resilience and Policy Implications

■ Health

- Vaccines to return to “new normal”

■ Macro

- Low interest rate \Rightarrow more fiscal, less monetary resilience

■ Finance

- Efficient debt restructuring (to avoid debt overhang) -- Capital requirements (buffers)
- Flexible exchange rate + MacroPru (limited \$-debt) -- Foreign exchange reserves (buffers)
- Distributed Ledger Technology (DLT)

■ Resilience Inequality \Rightarrow income and wealth inequality

■ Global value chains

- From “just in time” to “just in case” -- stress tests for GVC (resilience lessons from GFC)

■ Emerging Economies – poverty and middle income traps

■ Global geopolitics – global role of the dollar

■ Climate change

- Avoid tipping points
- Sustainability = resilience + no adverse trend

Resilience Inequality

Chapter 12

Inequality and Resilience

- Income inequality static measure
- Wealth inequality
 - Discount rate effects
- Social mobility dynamic measure
- Resilience inequality (new concept)
 - Some people bounce back more easily than others
... and hence can take more risk (earn higher risk premia)

Gender Inequality: Unemployment Increases in Recessions

International Economics and Resilience

Chapters 13, 14

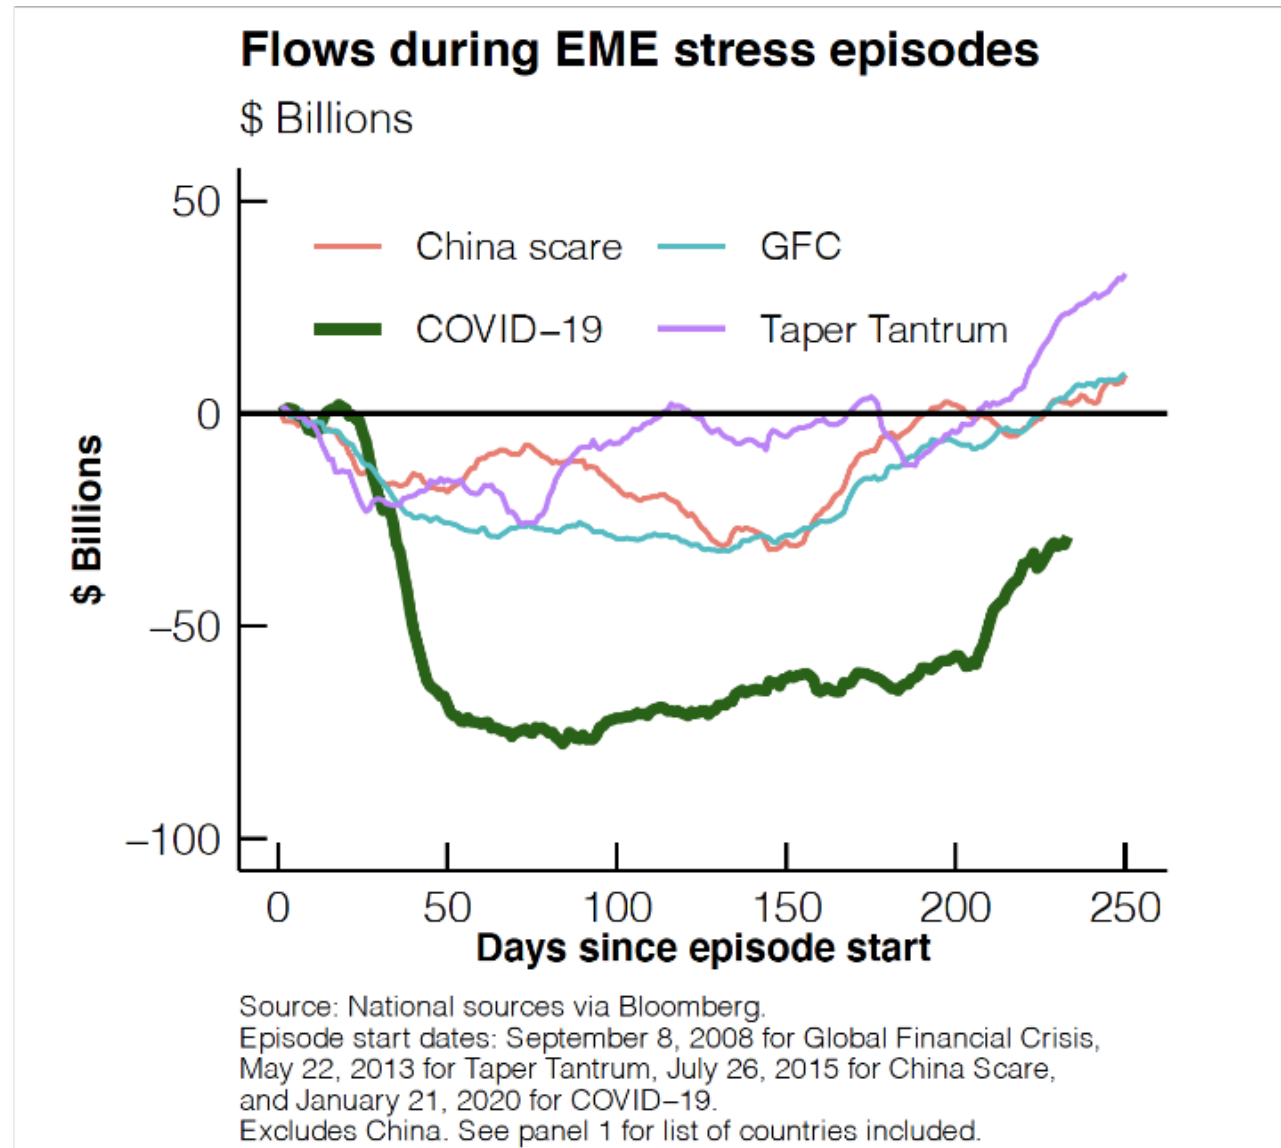

Global Resilience

- Emerging Economies
 - Poverty trap
 - Resilience to bounce back after a shock
 - Middle-income trap
- Sovereign Debt Restructuring, IMF's SDR, ...
- Geopolitics “zero-sum thinking”
 - US vs. China: Europe's choice
 - Face mask diplomacy, vaccine nationalism
- Global Finance – US dollar
- Floating exchange rate as resilience enhancer
 - If debt in domestic denominated currency
- Global safe asset – resilience for advanced economies
- Capital flows and US monetary policy

Global Financial Crisis – just avoided in March 2020

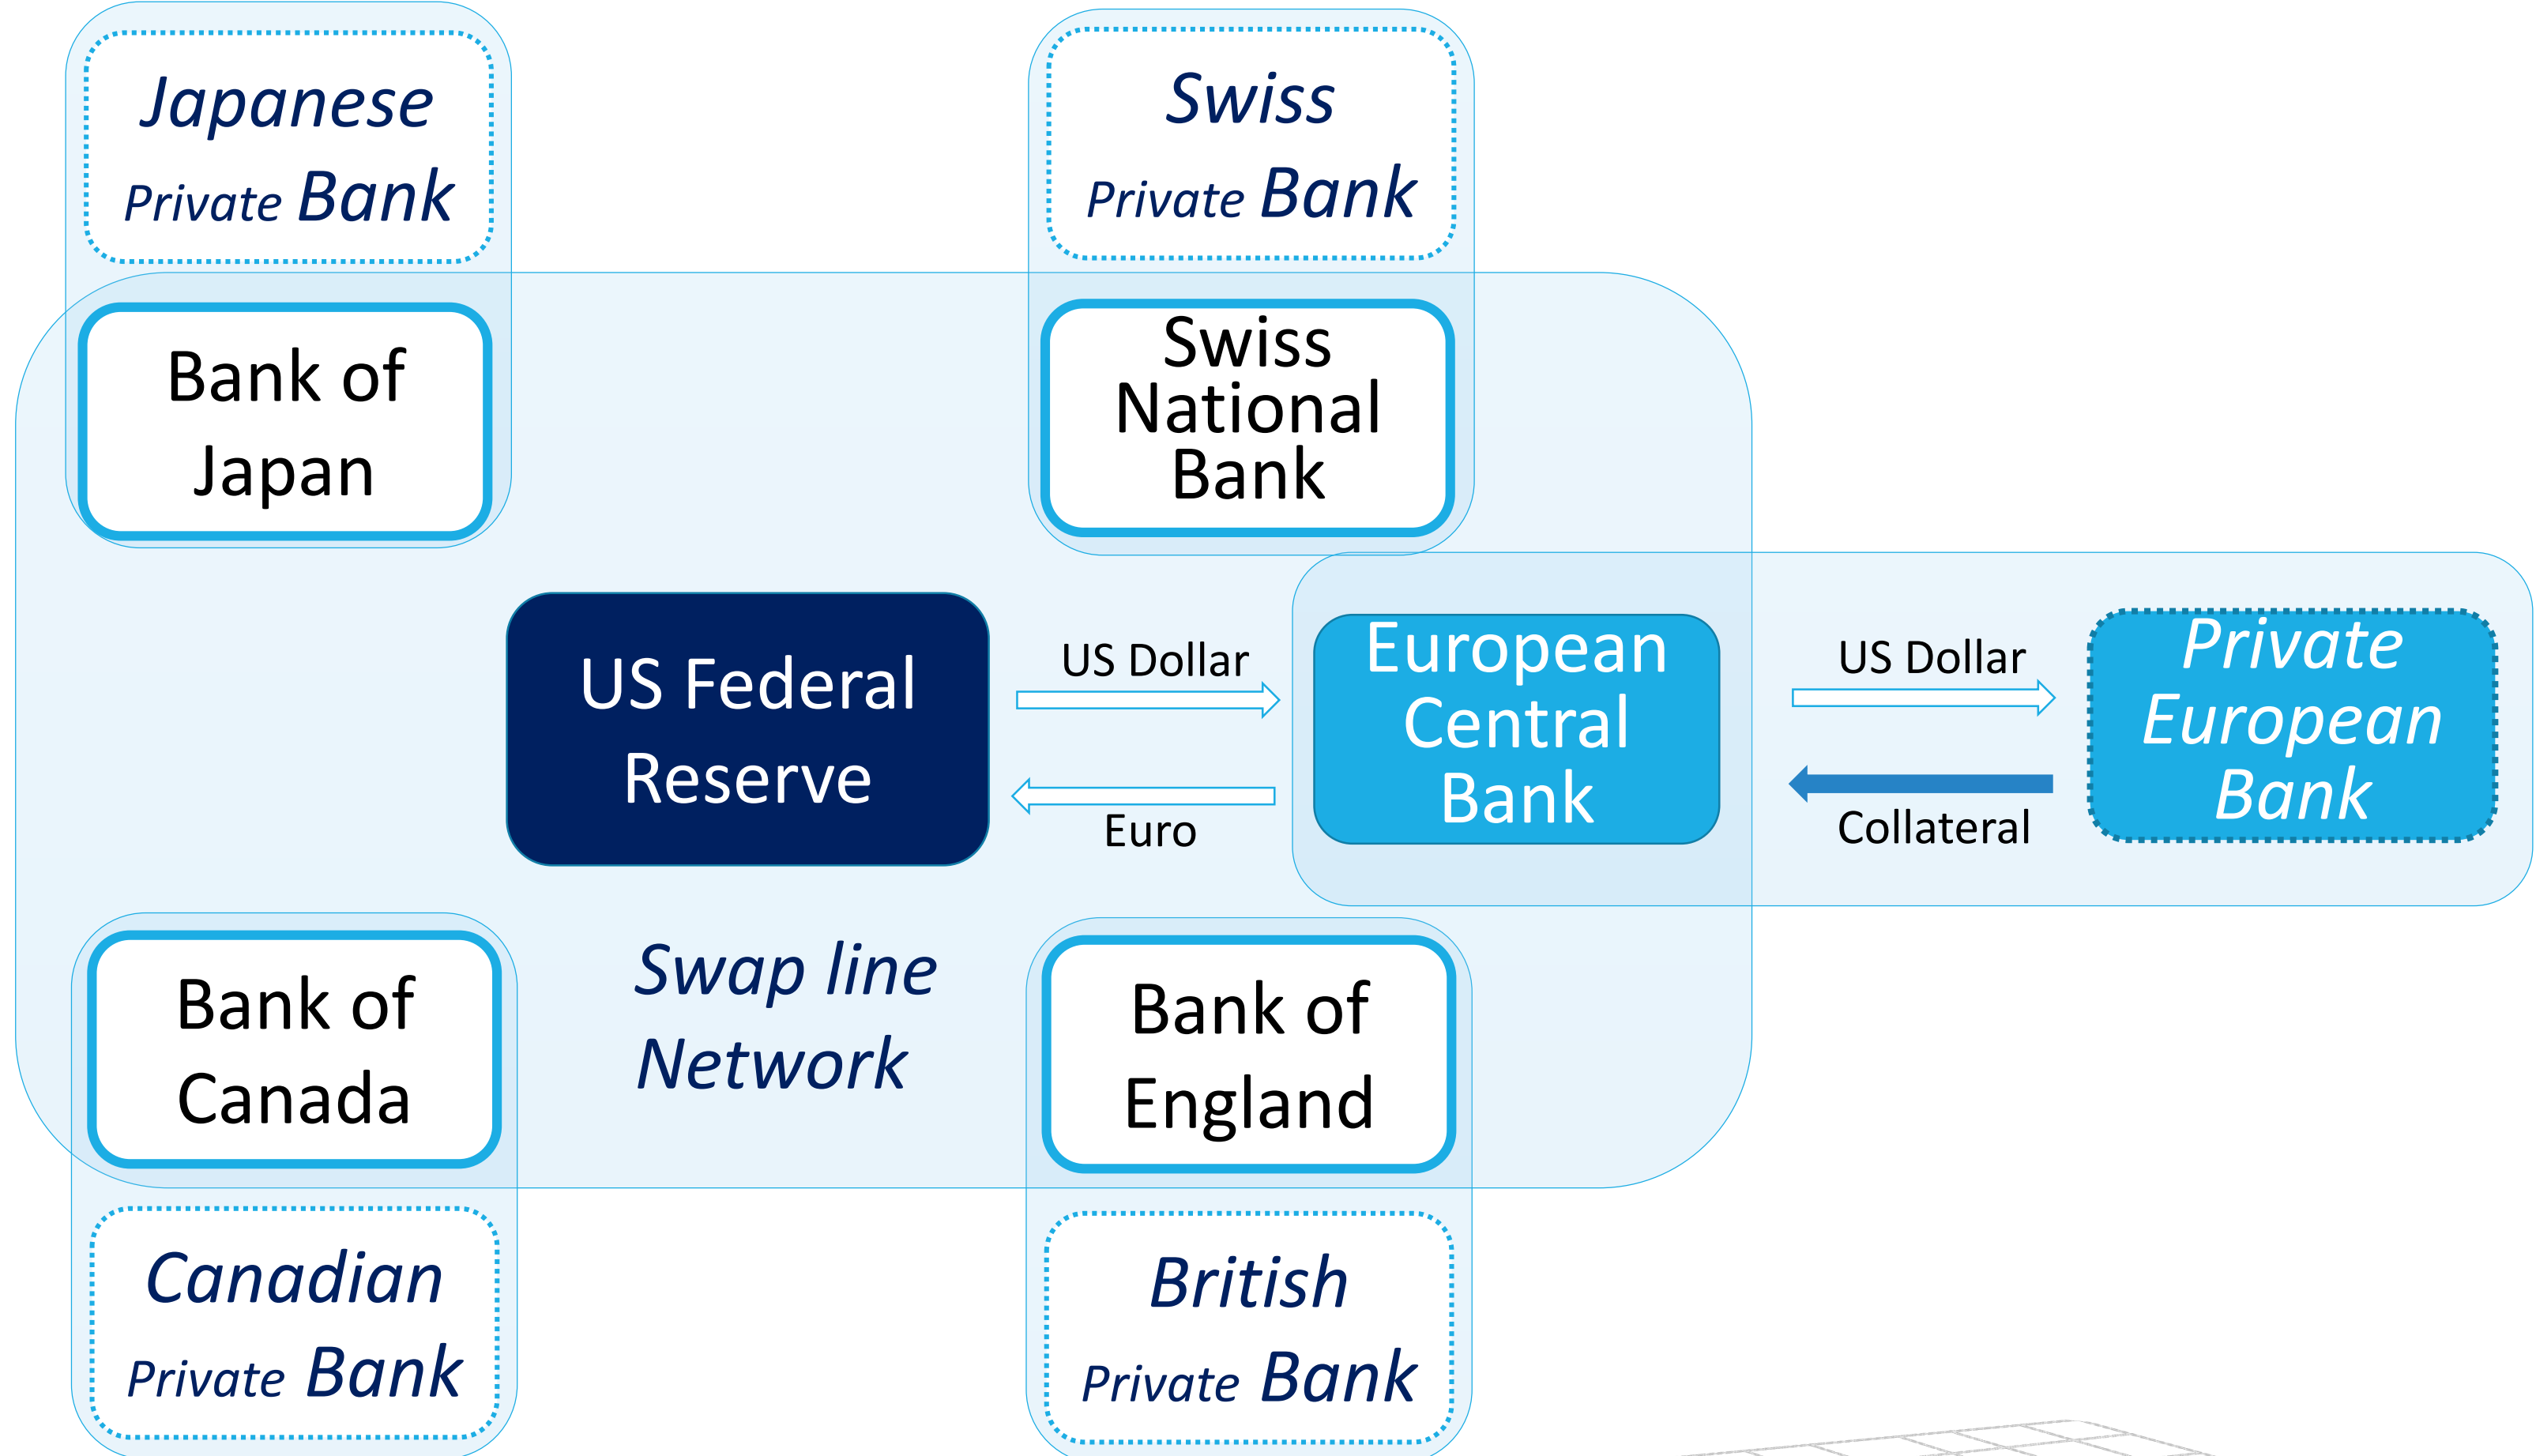

- Flight to safety in the US dollar

Size and speed!

- Fed interest rate cut and repo facility

*Japanese

Private Bank*

High Public Debt Levels, but low interest rates

- Debt/GDP vs. Value at Risk (Debt servicing cost | ·)

- Why is government debt interest rate so low?
Asset pricing formula with second term

$$\text{Asset Price} = E[\text{PV}(\text{cash flows})] + E[\text{PV}(\text{service flows})]$$

dividends/interest convenience yield

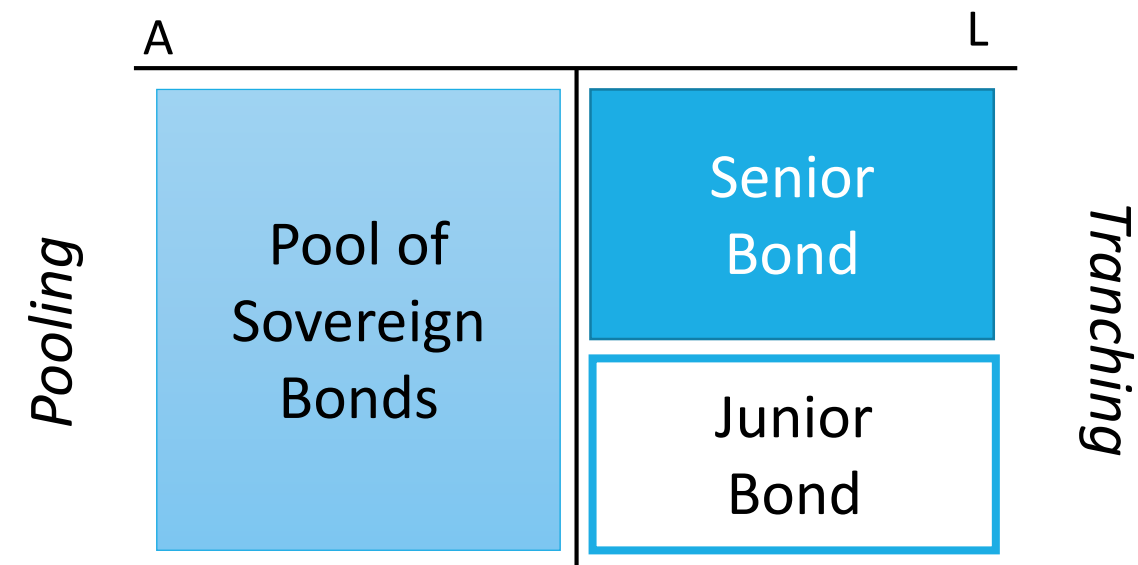

1. **Safe asset** service flow:

Precautionary savings + **retrading** (to partially insure idio risk $\tilde{\sigma}_c^2$)

2. Collateral constraint (Lagrange multiplier)

- Safe asset status of gov. bonds – **bubble** feature that can pop
 - Fiscal space to “defend bubble”

GloSBies

Resilience and Policy Implications

- Health

- Vaccines to return to “new normal”

- Macro

- Low interest rate \Rightarrow more fiscal, less monetary resilience

- Finance

- Efficient debt restructuring -- Capital requirements (buffers)
(to avoid debt overhang)

Resilience and Policy Implications

- Health

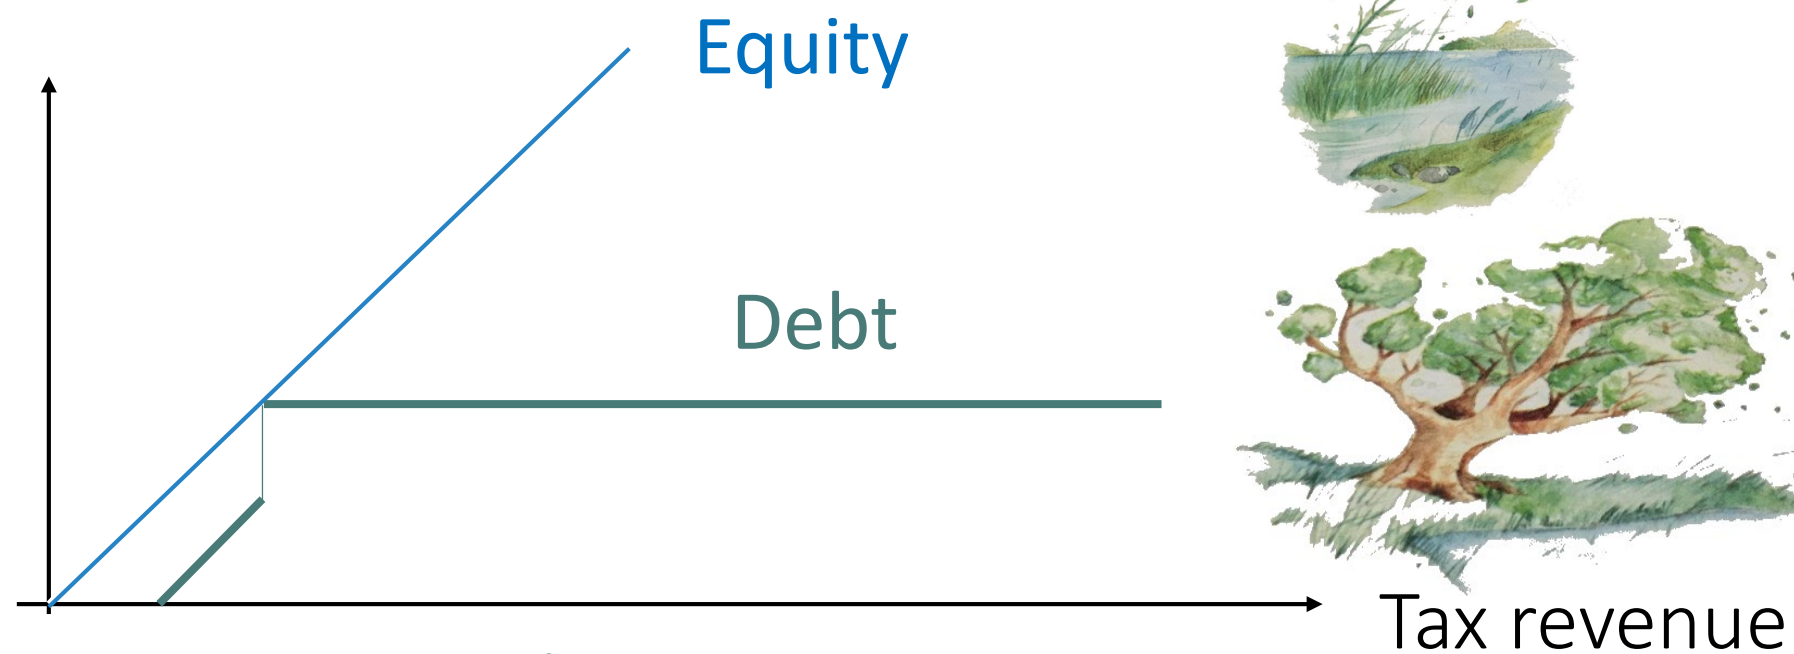

- Vaccines to return to “new normal”

- Macro

- Low interest rate \Rightarrow more fiscal, less monetary resilience

- Finance

- Efficient debt restructuring -- Capital requirements (buffers) (to avoid debt overhang)

“robust”/resistant until it breaks through “Robustness barrier”

Tax revenue

Resilience and Policy Implications

■ Health

- Vaccines to return to “new normal”

■ Macro

- Low interest rate \Rightarrow more fiscal, less monetary resilience

■ Finance

- Efficient debt restructuring (to avoid debt overhang) -- Capital requirements (buffers)
- Flexible exchange rate + MacroPru (limited \$-debt) -- Foreign exchange reserves (buffers)
- Distributed Ledger Technology (DLT)

■ Resilience Inequality \Rightarrow income and wealth inequality

■ Global value chains

- From “just in time” to “just in case” -- stress tests for GVC (resilience lessons from GFC)

■ Emerging Economies – poverty and middle income traps

■ Global geopolitics – global role of the dollar

■ Climate change

- Avoid tipping points
- Sustainability = resilience + no adverse trend

A Personal Conjecture

- In an increasingly complex society
- **Autocratic societies**
 - Seek **robustness** – attractive feature after crises
 - Suppression, minimize movements/disruptions
 - Surveillance
 - Tighten with each crisis ... no rebound
- **Open/democratic society**
 - More **resilient**
 - May appear wobbly when shock hits but internal mechanism allow for rebound
 - Open to mavericks
 - Transparency and more information flow/aggregation

Good in

- *Enforcing rules*

- *Invented universally accepted vaccines*

Outline of Book

- Part I: Society and Resilience
 - Part II: 4 Elements of Resilience Management: COVID
 - Part III: Macro Resilience
 - Innovation boost vs. Scarring
 - Financial whipsaw
 - Public Debt
 - Inflation whipsaw
 - Part IV: Global Resilience
 - EMDE
 - Geopolitics, World order, Global finance, Value chains, Climate
- 

Financial Economics and Resilience/Covid

Chapter 9

Resilience and Debt

“robust”/resistant until it breaks through “Robustness barrier”

Equity

Resilience and the Slope of the Yield Curve

■ Resilient path

Resilience and the slope of the yield curve

- Increasing \Rightarrow resilience (∇ recessions)
- Flat \Rightarrow random walk (permanent)

“Financial Markets Whipsaw”: Stocks and Corporate Bonds

- March 2020 shivers followed by strong recovery
 - **Stock market** record heights – IPOs like during NASDAQ bubble

*Record **IPOs** due to SPACs*

“Financial Markets Whipsaw”: Stocks and Corporate Bonds

- March 2020 shivers followed by strong recovery
 - **Stock market** record heights – IPOs like during NASDAQ bubble
 - **Corporate bond market** CB: Tail risk removal

“Financial Markets Whipsaw”: US Treasury

- March 2020 shivers followed by strong recovery

- Gov. bond market shivers**

CB: Market maker of last resort to preserve safe asset status

- What’s a safe asset?

Precautionary savings: $\text{Asset Price} = E[\text{PV}(\text{cash flows})] + E[\text{PV}(\text{service flows})]$

- Good friend:

can sell at high price and low-bid ask spread in crisis times

Government Debt, Fiscal Policy and Resilience/Covid

Chapter 10

High Public Debt Levels, but low interest rates

- Debt/GDP vs. Value at Risk (Debt servicing cost | ·)

- Why is government debt interest rate so low?

See Brunnermeier, Merkel, Sannikov (2020). "Debt as safe asset: Mining the Bubble"

High Public Debt Levels, but low interest rates

- Debt/GDP vs. Value at Risk (Debt servicing cost | ·)

- Why is government debt interest rate so low?
Asset pricing formula with second term

$$\text{Asset Price} = E[\text{PV}(\text{cash flows})] + E[\text{PV}(\text{service flows})]$$

dividends/interest convenience yield

1. **Safe asset** service flow:

Precautionary savings + **retrading** (to partially insure idio risk $\tilde{\sigma}_c^2$)

2. Collateral constraint (Lagrange multiplier)

- Safe asset status of gov. bonds – **bubble** feature that can pop
 - Fiscal space to “defend bubble”

Monetary Policy and Resilience/Covid

Chapter 11

“Inflation Whipsaw”

5 Year Breakeven Inflation Rate (TIPS)

- **2 traps** (“resilience destroyers”)
 - Deflation trap
 - Inflation trap (fiscal + financial dominance)
- **Independence** central bank + **MacroPru**
 - Accelerator and breaks

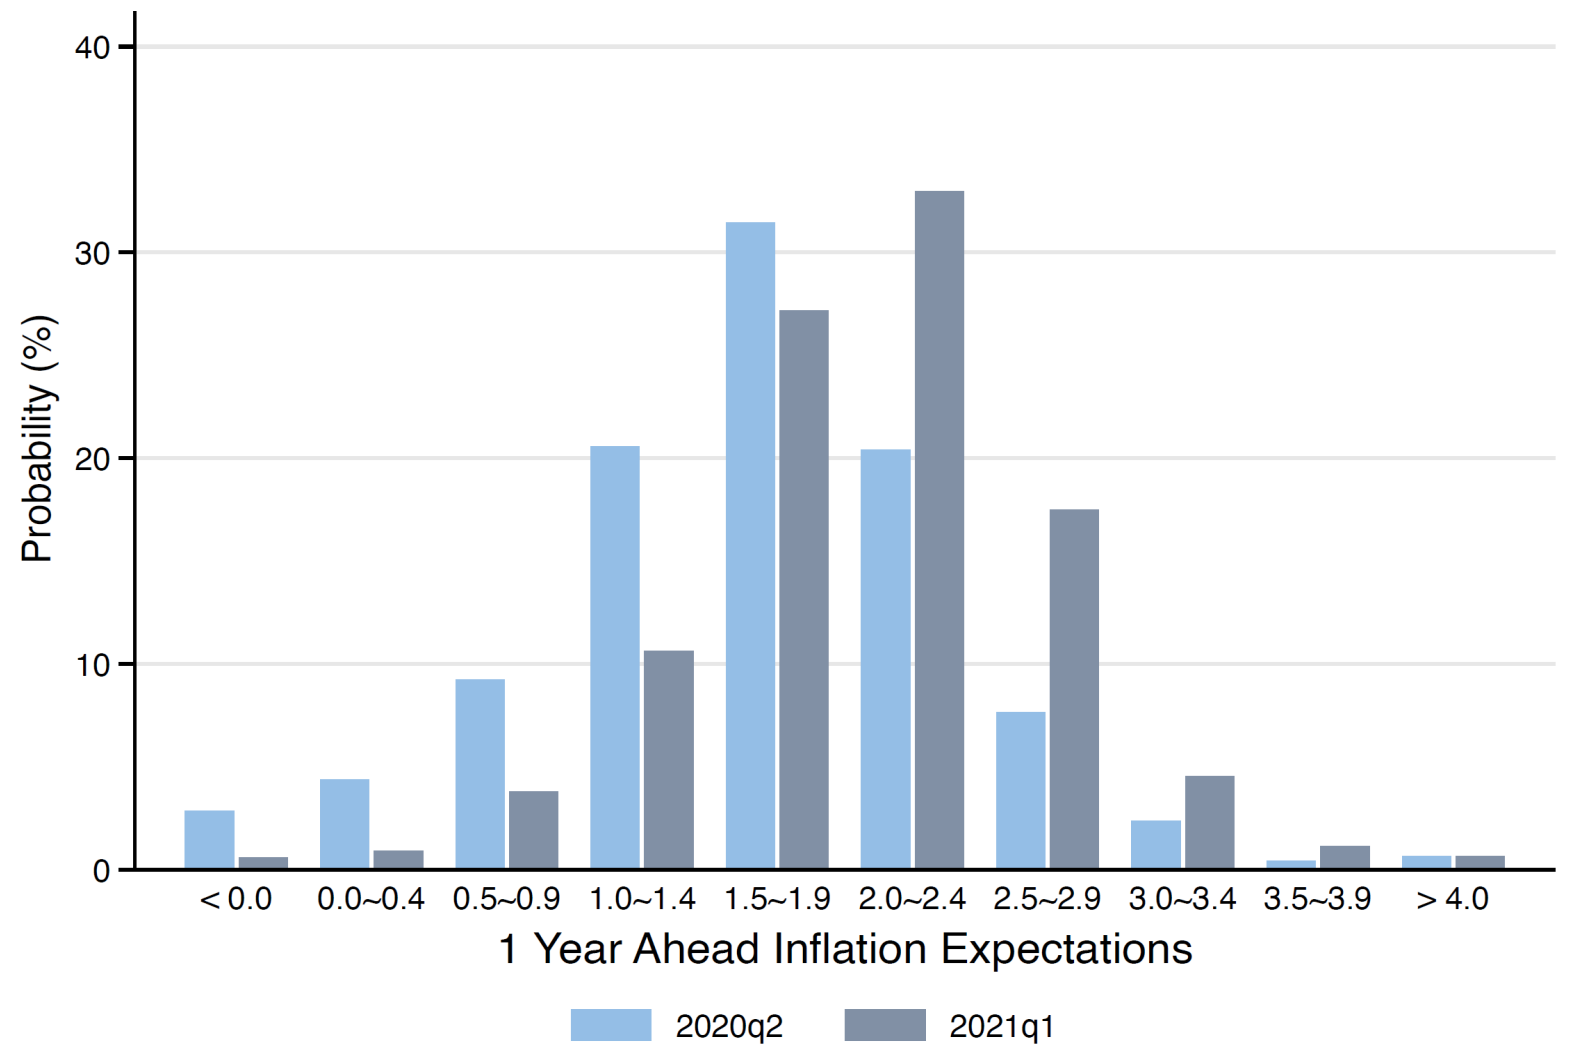

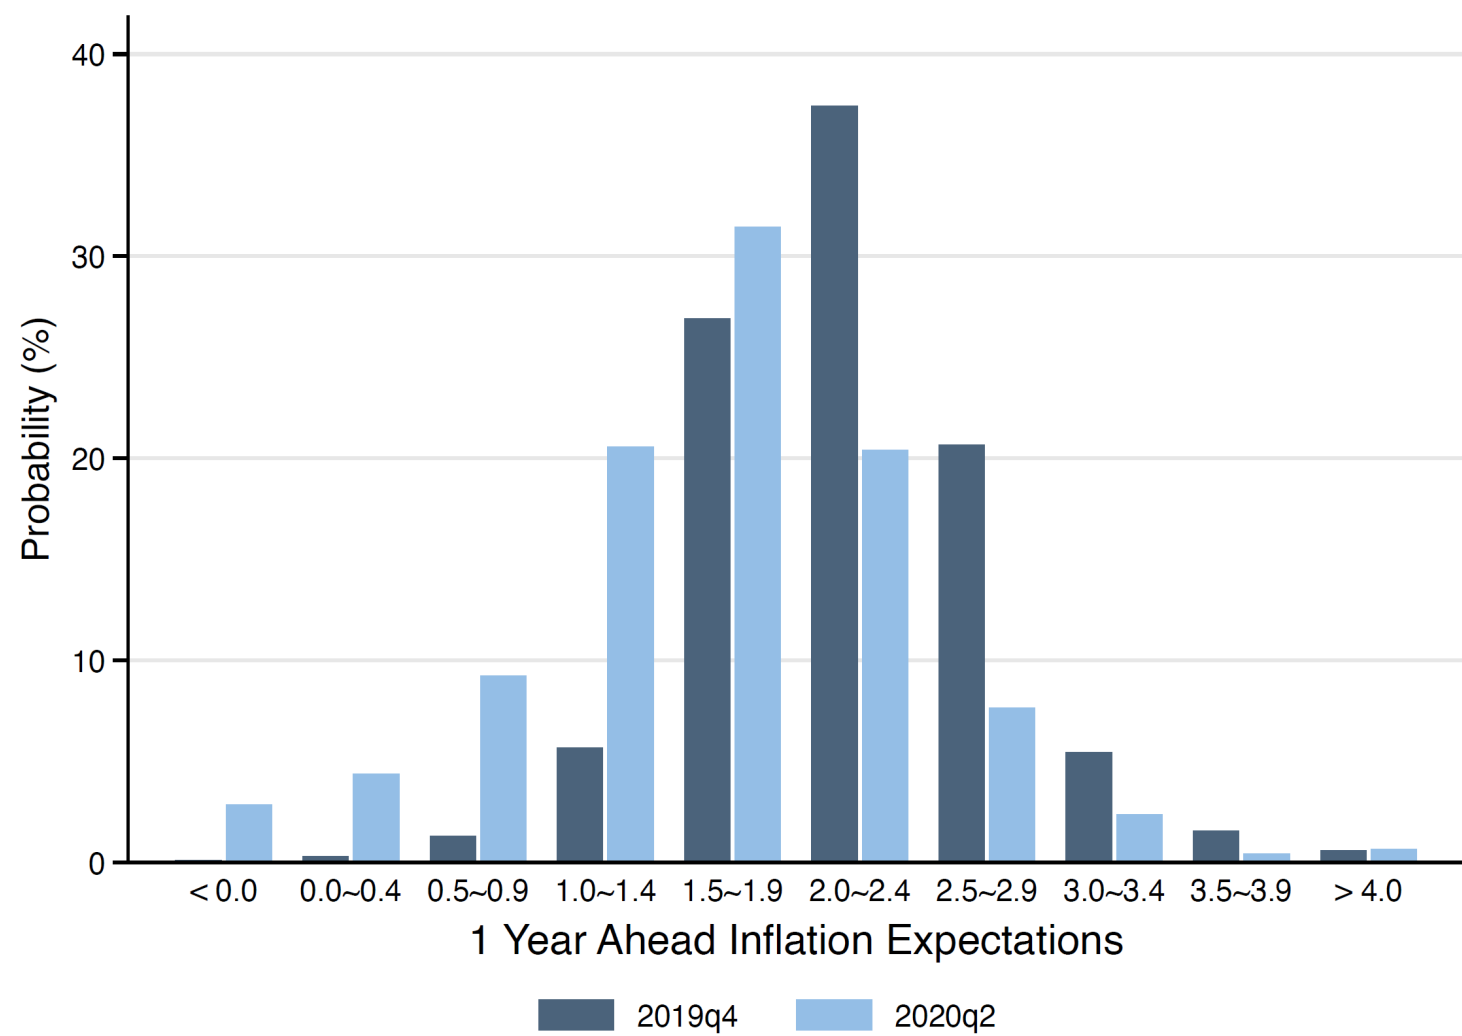

“Inflation Whipsaw”

- Stimulus checks ⇒ checking accounts at Banks
⇒ hold reserves at Fed
⇒ Fed buys Government debt (QE)
⇒ Government issues debt to finance stimulus
- Personal savings due to increase uncertainty

Shift in Inflation Expectations – Professional Forecasters

Shift in Inflation Expectations – Households

Spending patterns

FED Balance Sheet

ECB Balance Sheet

Fiscal Inflation Link

Resilience and the Yield Curve

Resilience \neq Risk and Growth

- Japanese GDP
 - Lack of resilience after financial crisis, resilience after Fukushima

“Financial Markets Whipsaw”: Stocks and Corporate Bonds

- March 2020 shivers followed by strong recovery
 - **Stock market** record heights – IPOs like during NASDAQ bubble
 - **Corporate bond market** CB: Tail risk removal

“Financial Markets Whipsaw”: US Treasury

- March 2020 shivers followed by strong recovery
 - Stock market record heights – IPOs like during NASDAQ bubble
 - Corporate bond market
 - **Gov. bond market shivers**
 - What’s a safe asset?
 - **Good friend analog:** can sell at
 - High price and
 - Low bid-ask spread (even at crises times)
 - Precautionary savings
 - Asset Price = $E[PV(\text{cash flows})] + E[PV(\text{service flows})]$
 - \Rightarrow Low (cash flow) interest rate $r < g$
 - **Safe asset tautology:** pop like a bubble

CB: Market maker of last resort
to preserve safe asset status

“Financial Markets Whipsaw”: US Treasury

- March 2020 shivers followed by strong recovery

- Gov. bond market shivers**

CB: Market maker of last resort to preserve safe asset status

- What’s a safe asset?

- Good friend: can sell at high price and **low-bid ask spread** in crisis times

Duffie (2020)

High **Public Debt** at Low Interest Rate

- Resilience:
 - Prior to shock: Low fiscal debt levels
 - During shock: Fiscal countercyclical response
- Be aware of interest rate spikes – loss of safe asset status
- New metric:
 - Value at Risk (**Debt servicing cost** | \cdot) instead of **Debt/GDP**
- Low interest rate environment
 - More **fiscal policy space**, esp. if $r < g$
 - Less **monetary policy space** ... hit ZLB/Reversal Rate

High Public Debt Levels, but low interest rates

- Debt/GDP vs. Value at Risk (Debt servicing cost | ·)

- Why is government debt interest rate so low?

See Brunnermeier, Merkel, Sannikov (2020). "Debt as safe asset: Mining the Bubble"

“Inflation Whipsaw”

- Stimulus checks \Rightarrow checking accounts at Banks \Rightarrow hold reserves at Fed \Rightarrow Fed buys Government debt (QE) \Rightarrow Government issues debt to finance stimulus
- Personal savings due to increase uncertainty

“Inflation Whipsaw”

5 Year Breakeven Inflation Rate (TIPS)

- **2 traps** (“resilience destroyers”)
 - Deflation trap
 - Inflation trap (fiscal + financial dominance)
- **Independence** central bank + **MacroPru**
 - Accelerator and breaks
